

MARCH 2024

STE A

MONTHLY COMMENTARY

March net performance was up +66 bps.

This month, macro indicators all around the world were encouraging and global equities posted strong returns with both US and Eurozone showing solid economic data but also stickier-than-expected inflation. This keeps on supporting a soft-landing scenario on the long-term but also delayed rates-easing on the short-term. Indeed, the FED sounded less accommodating than markets were expecting, this was clearly translated through implied numbers of 2024 rate cuts which reduced from 6 to 3. Consequently, market environment in March was more challenging for fixed income investors who suffered from a general underperformance in the bond space. However, with US equity valuations becoming less and less attractive, we might attend an asset class rotation in the coming months.

On the portfolio side, our strategies performed globally well on equity index futures and even if commodity strategies suffered from specific risk on grains, our overall portfolio still delivered positive returns thanks, we believe, to a proper systematic risk allocation between strategies.

From a risk perspective, although a VIX back down to usual levels, we remain very careful regarding potential volatility regime swings these coming months as markets will be extremely sensitive to main macroeconomic data issuance.

INVESTMENT STRATEGY

The Program consists of complementary systematic strategies, designed to deliver positive and uncorrelated absolute returns independently of market conditions.

In-depth understanding of Futures markets fundamentals and analysis of recurrent patterns are being combined with robust statistical models and advanced data-processing technics to deliver new sources of Alpha.

For this purpose, both fundamental data and alternative data - which contain complementary sources of information - are investigated and confronted. From those analysis, systematic investment technics have been designed to extract Alpha in a consistent manner over time and across different markets and asset classes.

The investment universe is limited to:

- most liquid US and European Equity Index Futures, including S&P500, Nasdaq100, Eurostoxx50, FTSE100, CAC40, DAX30
- most liquid Volatility Index Futures, including VIX and VSTOXX
- most liquid Commodities Futures, including Corn, Wheat and Soybeans

Since strategies are exploiting generic phenomenons and not specific to one particular market, this universe is subject to expansion in order to reach more and more diversification in terms of Alpha sources.

Holding period of each position varies from 1 day to 1 week and the portfolio is rebalanced on a close-to-close basis. This ensures an optimal scalability of the strategy and a limited market impact.

Rcube Asset management has integrated the Rcube STEA Program since June 2022

The indices selected to generate the above comparison are not available as a directly investible product. Generally, no individual can purchase an actual index as an investment holding for his or her portfolio. Please consider that any index performance is for the constituents of that index only and does not represent the entire universe of possible investments within that asset class. Limitations and biases to indices include survivorship, self reporting, instant history, etc.

The *HFRX Global Hedge Fund Index* is designed to be representative of the overall composition of the hedge fund universe. It is comprised of all eligible hedge fund strategies; including but not limited to convertible arbitrage, distressed securities, equity hedge, equity market neutral, event driven, macro, merger arbitrage, and relative value arbitrage Source: HFR Database

The *Bloomberg Barclays US Aggregate Bond Index* is a broad-based flagship benchmark that measures the investment grade, US dollar-denominated, fixed-rate taxable bond market. The index includes Treasuries, government-related and corporate securities, MBS (agency fixed-rate pass-throughs), ABS and CMBS (agency and non-agency). Investors frequently use the index as a stand-in for measuring the performance of the US bond market.. Source: Bloomberg Bloomberg LBUSTRUU Index.
